Website: musila.dev | Portfolio: musiladev.vercel.app

Professional Summary

Software Developer with hands-on experience building and deploying production-ready intelligent systems—including a RAG chatbot that reduced internal knowledge retrieval from 15 minutes to under 2 seconds and saved 45 support hours weekly. Currently delivering measurable outcomes: 95% answer accuracy, 30% fewer deployment failures (via CI/CD), and 25% faster API response times. Led technical initiatives and mentored 100+ student developers on ethical AI. Passionate about clean architecture, thoughtful design, and solving real-world problems. I bring proven deployment (Play Store, Vercel, Render), cross-functional collaboration, and a builder's mindset that turns complex requirements into scalable, user-trusted software.

Technical Skills

- Frontend & Mobile: React (TypeScript), HTML/CSS/JS, Next.js, React Native, Android.
- Backend & Databases: Go, Python, Node.js, MongoDB, PostgreSQL, RESTful API design
- App Deployment: Google Play Store, APK signing, CI/CD (GitHub Actions, Fastlane)
- AI & Data: LangChain, ChromaDB, vector search, RAG pipelines, LLM integration
- Core: System architecture, design patterns (Singleton, Factory, Repository), AI ethics, cross-functional leadership

Professional Experience

AI Software Developer | Tech Innovators Network (THiNK) | Jan 2026 – Mar 2026 | Embu, Kenya

- Built and deployed a RAG chatbot (Python, LangChain, ChromaDB, PostgreSQL) indexing 290+ documents – reduced knowledge retrieval time from 15 min → <2 sec.
- Achieved 95% answer accuracy, saving support team 45 hours/week; built React frontend + Android app (Kotlin, Jetpack Compose) with token auth and offline caching.
- Published Android app to Google Play Store as closed beta; automated content ingestion and semantic retrieval.

Product Developer (Internship) | MarketForce | Jul 2024 – Feb 2025 | Nairobi, Kenya

- Implemented Repository & Factory patterns in B2B e-commerce order module, improving maintainability.
- Reduced deployment failures by 30% using Docker, Kubernetes, GitHub Actions CI/CD.
- Optimised REST API response times by 25% via query refactoring and caching.

ICT Support Officer (Internship) | University of Embu | May 2025 – Aug 2025 | Embu, Kenya

- Provided technical support and network troubleshooting, ensuring 99% uptime for campus labs.

Key Projects

Cracksfox Platform Inc – Platform and web architecture for Cracksfox.- cracksfox.com

- Engineered a high-performance web ecosystem with advanced security layers and optimized search engine visibility.

SaneGenius – Open-source developer education platform created to guide learners.- sanegenius.com

- Built interactive learning pathways and structured technical modules focused on modern software engineering workflows and AI integration.

LindaBot – Standalone RAG chatbot (React, FastAPI, LangChain, ChromaDB, GPT-based LLM) for the Office of Data Protection Commissioner (odpc.go.ke).

- Indexed 2000+ ODPC policy documents; inferenced, handling 1k+ Q&A requests with 95% accuracy.

Community Leadership & Recognition

Founder & Leader – Responsible Computing Young Innovators Club, University of Embu (Jan 2024 – present)

- Mentored 100+ student developers in ethical AI and responsible tech; organised hands-on workshops → 60% increase in engagement.

Member & Event Organizer – Google Developer Groups (GDG) on Campus

- Led THiNK Botathon (AI/ML), ICP Hubs Kenya (Blockchain), Agentic AI Workshop, Droidcon X Fluttercon Ke26.
- IBM Student Ambassador – AI literacy sessions for 150+ students.

Innovation Awardee – Recognised at national & regional innovation forums. Karatina University Helicode X GeniusLab Hackathon – 1st Runners Up.

Education Bachelor of Science in Information Technology | University of Embu, Kenya

- Relevant coursework: Software Engineering, Artificial Intelligence, Data Structures & Algorithms, Database Systems, Cloud Computing.

Certifications

- Aspire Leadership Program Graduate – Aspire Institute (July 2026)
- Building AI Agents & Automations – Build Fast With AI (Mar 2026)
- Building RAG and LLMs using JavaScript – Microsoft Reactor (Feb 2026)
